Project Management

Timeline & Milestones:

Week 1:

- Requirements gathering and design.
- Create wireframes and UI/UX design.

Week 2:

- Development of core features (add/edit/delete items, filtering, categorization).
- Setting up the database (SQLite/Room) and local storage.

Week 3 - 4:

- Implementing search functionality and UI polishing.
- Testing core functionalities (unit testing, user testing).

Week 5:

- Finalizing the app and preparing for release.

Risks Management:

Complexity in Database Management:

Storing and retrieving data efficiently as the app's database grows may present performance issues if not managed correctly.

User Engagement:

Gaining user traction might be a challenge in a competitive market of media tracking apps, unless the app provides unique or superior features.
